EDUCATION

University of Illinois – Chicago

Expected Graduation May 2026

Bachelor of Science in Computer Science, Minor in Business Administration

Cumulative GPA: 4.0

Relevant Coursework: Data Structures, Algorithms, Software Design, Artificial Intelligence, Object-Oriented Programming, Computer Design, Systems Programming, Linear Algebra, Web Development (CodePath)

SKILLS

Programming Languages: Python, C/C++, Java, JavaScript, SQL, Dart, PHP, Go
Frameworks/Platforms: React, Next.js, Node.js, Vite, Yii, Spring, Bootstrap, Flutter, Flask, GoogleTest, Jest
Technologies: HTML/CSS, ASAN, Nginx, RESTful APIs, JWT, OAuth, MariaDB, SQLite, MySQL
Software Tools: Git/GitHub, Confluence, Android Studio, Maven, Postman

EXPERIENCE

Data Structures Teaching Assistant (CS 251)

January 2025 - Present

UIC College of Engineering

- Mentor **400+** students in C++ data structures and algorithmic problem-solving, offering course material and project support during lecture assistance and weekly in-person office hours.
- Assist in weekly lab sessions for **30+** students, covering complex concepts such as binary trees, hash tables, graph algorithms, and searching & sorting techniques.
- Guide students in utilizing tools such as VS Code, Git, ASAN, and GoogleTest to improve coding efficiency, version control, and advanced debugging in software development.

Software Developer Intern

June 2024 - August 2024

Viettel Digital

- Developed RESTful APIs for user interaction in PHP, Spring and Yii for an integrated social network system, increasing engagement and connectivity for over **24 million** users.
- Implemented **JWT** and **OAuth 2.0** for API authentication and authorization of users, merchants, and admins, enhancing security and system performance.
- Improved database query performance by **40%** using optimized data retrieval techniques and API validation via Postman.
- Collaborated in Agile sprints, participating in weekly team meetings to improve system scalability and efficiency.

Software Developer Intern

July 2023 - August 2023

VISSOFT

- Adapted the **Bloom Filter** algorithm for fast data retrieval, reducing lookup time and saving **80%** of memory usage in a Java-based library management system.
- Constructed and optimized a MySQL backend, implementing efficient indexing and query optimization to enhance data processing and storage efficiency.
- Integrated the **GoogleTest** framework to develop **20+** comprehensive unit tests, ensuring reliability and functionality.

PROJECTS

Digital Privacy | React, Vite, Ollama API | [Website](#)

May 2025

- Built a gamified privacy-awareness web app for children using React and the Ollama AI API, leveraging a “Monsters, Inc.” theme to deliver an engaging, story-driven learning experience.
- Designed a dynamic “canister” mechanic powered by 30+ regex patterns for personal-info detection, achieving **90%** accuracy in user tests and reducing false positives by **25%**.
- Developed a smooth, multi-phase chat flow for “Mike” the AI with memory reminders and retry logic, handling **700+** unique chat sessions during a 2-week pilot.

TariffFarm | Python, Flask, Next.js, Gemini | **Winner** of WildHacks 2025 | [GitHub](#)

April 2025

- Collaborated in a team of 4 to develop a web app that calculates and visualizes the cost of importing commodities into the U.S., earning **3rd place overall** at WildHacks 2025.
- Engineered backend logic with **Flask**, implementing API endpoints and data parsing pipelines to track live trade data.
- Adapted cost calculation algorithms and integrated Gemini AI to analyze tariff breakdowns and shipping route suggestions.
- Developed an interactive frontend with **Next.js** and implemented amCharts for real-time, dynamic globe visualizations.

Autonomous Debris Removal Vehicle | Python, OpenCV, Dart | HackIllinois 2025 | [GitHub](#)

February 2025

- Collaborated with a team of 4 to build an autonomous debris removal vehicle to improve crop harvesting efficiency.
- Utilized a Raspberry Pi for real-time control and sensor integration, enhancing equipment safety and reducing labor.
- Achieved **90% accuracy** in real-time debris detection, grasping, and removal by leveraging **OpenCV** for image processing, utilizing cameras and ultrasonic sensors.
- Integrated a **Flutter-based** mobile application to remotely control the robot’s operations while monitoring essential data.

LEADERSHIP & ACTIVITIES

Hackathon Organizer | SparkHacks 2025

August 2024 - February 2025

- Coordinated logistics for UIC’s hackathon with **400+** participants, managing event setup, supplies, and operations.
- Collaborated with a team of 4 to manage funds effectively, securing catering, prizes, and essential resources for participants.

Event Coordinator | Vietnamese International Student Association at UIC

January 2025 - Present

- Organize and oversee cultural and social events for the Vietnamese international students’ community at UIC.
- Collaborate with the Event team to coordinate logistics, secure and set up venues, and handle event day execution.
